

# Portable power supply matching

What is a portable power supply?

A portable power supply is a large-capacity power supply that can store electric energy in portable power stations. These portable power stations are ideal for use inside or outside your home during outdoor activities for a consistent energy supply. A portable power station has different outputs and can be charged in multiple ways.

How do I choose the right size portable power station?

To select the right size of portable power stations, you should determine what devices you want to power and for how long. For example, a Jackery Explorer 3000 Pro Portable Power Station can charge a gaming computer (200W) and a laptop (80W). Working Time = Capacity in Wh  $\div$  0.85  $\div$  Operating wattage of the appliances.

What should I know before using a portable power supply?

Before using a portable power supply, follow specific instructions given by the manufacturer. These may include ensuring it is fully charged before use, using appropriate outlets and ports, etc. While you emphasize the usage of a portable power station, maintaining it is equally important.

What is a solar powered portable power supply?

A solar-powered portable power supply offers solar power solutions to homes. These are also used during blackouts, off-grid living, and outdoor adventures, ensuring flexibility through expanding the system with additional batteries. Portable power stations like the Jackery Portable Power Stations have developed portability.

Why should you choose a portable power station?

A portable power station with a higher capacity will be able to store more energy and therefore power devices for a longer period of time. This number stipulates the maximum number of watts the power station can generate for one hour. For example, a 1,000-watt power station will charge a device that requires 1,000 watts for one hour.

How to choose a battery for a portable power station?

If you use the portable power station for various scenarios, you can choose AC ports for electrical equipment, Type-C for charging smartphones, and DC carport for automotive equipment. Lead-acid and lithium-ion batteries are primarily used in portable power stations. Weight, capacity, and lifespan should be considered when choosing a battery type.
