

10W solar panel charging 5W battery

Can a 5W solar panel charge a 12V battery?

Yes, a 5W solar panel can charge a 12V battery. Then, after doing it, I saw that Google isn't exactly giving the best answer to this question: Huh? And I decided to write this article to set the record straight. Yes, you can charge a 12V battery with a 5W solar panel. You just need to make sure it's a 12V solar panel.

Are 5W and 10W solar panels good for 12V batteries?

Based on the above charge times, we can draw some conclusions: 5W and 10W solar panels are good for slow, trickle charging 12V batteries. They're a good size solar panel for maintaining a 12V battery's charge, and will slowly charge it up over the course of weeks -- maybe even months depending on the weather and size of the battery.

Can a 5W solar panel work with a 12V charge controller?

Make sure to get a 12V 5W solar panel. If it is a lower voltage 5W panel (like 6V or 9V) it won't work with a 12V charge controller. Make sure your charge controller is compatible with your battery's chemistry. For example, some charge controllers only work with lead acid batteries. Others work with lead acid and lithium batteries.

How long does it take a 5W solar panel to charge?

According to our solar panel charge time calculator, it takes around 107.3 peak sun hours for a 5W solar panel to fully charge a 50Ah 12V lead acid battery using a PWM charge controller. And here are the estimated charge times for 5 other common solar panel sizes:

What size solar panel will charge a 12V battery?

80W and 100W solar panels are good for fast charging large 12V and car batteries. If it's a 50Ah battery, they can fully charge it in around 12 hours or less of direct sunlight. For more help on finding the right size solar panel for your solar charging setup, check out my post on what size solar panel will charge a 12V battery quickly.

Can a 10W panel charge a 12V battery?

A 21.6V VOC rating is also pretty standard for a 12V panel. Newpowa ships their 10W panel with no connectors, but bare wires, which is great if you're going to use it to charge a 12V battery, but also if you plan on wiring it straight to a 12V accessory. Bare wires also make it easy to install whatever connectors you would like.
