A supercapacitor, also known as an ultracapacitor or electrochemical capacitor, is an energy storage device that stores electrical energy through electrostatic and electrochemical processes. Unlike traditional capacitors, which store energy solely through charge separation, supercapacitors employ mechanisms like electrostatic double-layer capacitance and ...

The most common type of supercapacitors is electrical double layer capacitor (EDLC). Other types of supercapacitors are lithium-ion hybrid supercapacitors and pseudo-supercapacitors. The EDLC type is using a dielectric layer on the electrode - electrolyte interphase to storage of the energy. It uses an electrostatic mechanism of energy storage.

Hybrid capacitors combine electrolytic and polymer advantages. While capacitors nominally store energy in the form of an electrical charge, their usage, size, and construction all vary greatly. Small devices can act as filtering components, and larger devices - both in terms of physical size and charge capacity - can act to even out dips in ...
