

Why should you lease a site for a battery energy storage system?

Land is the most important resource for the development of battery energy storage systems. Several factors must be considered when considering the leasing of a site for a BESS project, some of the most important being: The size of the land required for a BESS project depends on the capacity of the battery system.

#### How much land does a Bess project need?

The land requirement varies,BESS projects can be as small as two acres,or as large as 30 acres. Typically,BESS developers look for between two to 15 acresof relatively flat-lying land. Battery sites should be located near to existing infrastructure and in areas that minimise the impact on nearby residential properties.

#### What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

#### What factors should be considered when leasing a site for a Bess project?

Several factors must be considered when considering the leasing of a site for a BESS project, some of the most important being: The size of the land required for a BESS project depends on the capacity of the battery system. Factors such as battery technology, energy density, and project scalewill determine the necessary land area.

#### What land should be used for a Bess project?

The land for a BESS project must be large enough to accommodate the system and any associated equipment. The land must also be easily accessible for construction and maintenance vehicles. BESS can have an impact on the environment, so it's important to select a site that does not currently contain active wildlife habitats.

#### Do energy storage systems need zoning standards?

Consequently, zoning standards are generally not necessary for these energy storage systems. Define BESS as a land use, separate from electric generation or production but consistent with other energy infrastructure, such as substations. BESS have potential community benefits when sited with other electric grid infrastructure.
