Flywheels: are energy storage devices that store kinetic energy. They consist of a spinning rotor that rotates at a high speed, which stores energy [50]. When the demand for energy is high, the rotor releases its stored energy to power turbines and generate electricity.

Unsold products increase the cost of storage, especially if the product is large in size, or perishable, requiring special storage facilities to store it, which also increases the cost of storing it. Inventory software reduces the

Pumped hydro energy storage (PHES) store energy in the form of potential energy of water that is pumped from a lower reservoir to a higher-level reservoir. In this type of system, low cost electric power (electricity in off-peak time) is used to run the pumps to raise the water from the lower reservoir to the upper one (Rehman et al., 2015). (2)
