Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

Why is a battery storage system better than a mw / GWh system?

For large-scale (MW/GWh) and long-term (hours-days) storage, this system beats batteries because of its low cost: for batteries, the "sizing of the energy capacity and the power capacity cannot be separated. Therefore, the investment cost may increase significantly, if only an expansion of the energy capacity is expected."

The cost of energy storage is typically measured in dollars per kilowatt-hour (kWh) of storage capacity. According to the same BloombergNEF report, the average cost of lithium-ion batteries was \$132 per kWh in 2021....
