### **Inverter Energy Storage for Home Use**

Why does stored solar power need to be inverted?

Existing solar systems typically have solar inverters which change the DC power produced by panels to AC power that can be consumed in your home or exported onto the grid. But if you want to store that AC power in a battery, it needs to be inverted again to DC power.

#### What does a solar inverter do?

A solar inverter's main function is to switch DC power created by solar panels into AC powerthat's usable for your home appliances. They also collect and transmit valuable data to help you monitor the production and health of your solar system.

#### How do I choose the best solar inverter?

Choosing the right inverter is key to maximizing your solar production, increasing your savings, and monitoring the health of your solar system. To find the best inverter for your needs, connect with a solar.com Energy Advisor review custom designs and proposals. Best Price Guaranteed.

#### How many inverters can a smart home Panel 2 support?

The DPU is a combination inverter and battery, and the system is expandable from 6kWh to 90kWh capacity. Each Smart Home Panel 2 can support up to three inverters, and each inverter can handle up to five stackable batteries. Even without the expanded storage capacity, a single EcoFlow DPU can provide essential power for a home for up to two days.

#### Why is a solar inverter so dangerous?

Because the inverter is the brain of your solar system, and it's also, historically, the device that has the highest probability of failure, which can leave you in the dark (literally and figuratively). A solar inverter's main function is to switch DC power created by solar panels into AC power that's usable for your home appliances.

### Can solar power be stored in a battery?

Yes, solar power can be stored in a battery. Existing solar systems typically have solar inverters which change the DC power produced by panels to AC power. However, to store that AC power in a battery, it needs to be inverted again to DC power.

A home storage battery will store green energy for later use in your home. So, you can run your home on low-cost battery power, rather than drawing from the grid during peak hours. In homes with renewables, the battery will take its charge from the available renewable source. (Typically solar, though some homes use wind or hydro turbines.)

This allows it to convert any AC power to DC for storing in the battery cells, and back to AC to use in your home. That means you can use the 5P battery to store electricity from any source, not just solar panels. For example you could charge it from the grid at off-peak times, then use the stored energy at more expensive peak times.
