

Repair uninterruptible power supply in Aarhus Denmark

What causes an uninterruptible power supply (UPS) to fail?

As essential as an uninterruptible power supply is, a UPS is also prone to its own set of potential mishaps. In fact, UPS system failure ranks as a top cause of unplanned data center outages. This can be a very costly problem indeed; here are some common causes of issues: Battery performance is critical for almost every UPS system.

Is working on an uninterruptible power supply dangerous?

Working on an Uninterruptible Power Supply (UPS) can be dangerous and may cause serious injury or even death. It is important to take appropriate safety measures and follow proper procedures when working on a UPS. The following disclaimer is provided to ensure that anyone who is working on a UPS is aware of the risks involved:

Can AES repair a power supply?

We're more than capable of handling your power supply repair needs, too! Our proven electronics repair process is both effective and efficient. Here's how we approach every repair:

Do you need a reliable power supply?

In an industrial or commercial setting like yours, having a reliable source of power is absolutely mission-critical to the success of your business processes and productivity. But sometimes, the power can falter or go out, which means you also need a reliable, uninterruptible power supply (UPS).

Can a redundant power supply cause overheating?

Even a redundant power supply like a UPS can be impacted by power surges or other similar fluctuations. This can result in undue stress and eventual overheating of your unit. Regular inspection and maintenance can help to prevent any unnecessary downtime.
