

St Johns Wind Power System

Where is the first large-scale wind farm in Saint John's history?

Before this year is over, the first large-scale wind farm in our region's history will be completed and operational. Natural Forces is constructing the Burchill Wind Energy Project at a site in Lorneville. It will supply Saint John Energy with enough electricity to power roughly 15 per cent of the city.

Is Saint John energy building a wind farm?

While construction has formally been underway for some time, the wind farm is now really starting to come alive. This is also a historic time: as Saint John Energy marks 100 years of serving the city, we're also bringing online the first utility-scale wind farm in the city's history. We could not be more proud.

How many turbines does Saint John energy have?

Featuring 10 turbines, it will provide 42MW of power, and supply 15% of Saint John's energy, which will be purchased by Saint John Energy at a set price. If playback doesn't begin shortly, try restarting your device. Videos you watch may be added to the TV's watch history and influence TV recommendations.

Who is Saint John energy?

Saint John Energy is Burchill's interconnection partner, transmitting the power produced there to the city's grid and energy buyer. Project commissioning and grand opening ceremony

When will Saint John get its first wind turbine?

And in a few weeks, the first of 10 turbines will start to go up as the partners target the end of December to begin the start-up process. From that history-making moment when the turbines start turning, Saint John will be enjoying its first injection of utility-scale wind energy.

Why does Saint John energy use a battery system?

It also helps store extra electricity when the demand is low and helps address peak energy demands during the coldest winter months. The battery system may also help Saint John Energy provide power to customers during power outages due to storm events.
