Abstract: Ten-switch three-phase three-level inverter (TP-TLI) is receiving more attention owing to the reduced system cost compared to traditional TP-TLIs. However, it still faces serious neutral-point voltage (NPV) balance problems. This article proposes a novel virtual space vector modulation (NVSVM) with optimized neutral-point voltage control (NPVC) capability.

Space vector pulsewidth modulation (SVPWM) provides enhanced performance for the coupled ten-switch three-phase three-level inverter (TP-TLI). However, it suffers from high common-mode voltage (CMV) and unbalanced neutral-point voltage (NPV). To solve this problem, a CMVR_SVPWM with CMV reduction and NPV control (NPVC) is proposed in this article. By ...

The ten-switch inverter is recently proposed in the literature to replace the neutral clamped point three-level inverter; it can produce a two/three-level output voltage using only ten switches. The conventional modulation strategies generate a large common mode voltage (CMV), which increases the leakage current. The use of the sinusoidal pulse width modulation ...

Common-Mode Voltage Reduction and Neutral-Point Voltage Control Using Space Vector Modulation for Coupled Ten-Switch Three-Phase Three-Level Inverter December 2021 IEEE Transactions on Power ...

This inverter protects against over-voltage by shutting down at 16V and protects against under-voltage by shutting down at 10V. The output voltage for this is a regular 110V. There's also a protection system in place for thermal and overload protection. The overload protection works quite well, and the unit has excellent power regulation.

Space vector pulse-width-modulation (SVPWM) provides enhanced performance for the coupled ten-switch three-phase three-level inverter (TP-TLI). However, it suffers from high common-mode...
