A thorough analysis into the studies and research of energy storage system diversity-based on physical constraints and ecological characteristics-will influence the development of energy storage systems immensely. This suggests that an ideal energy storage system can be selected for any power system purpose [96].

The flywheel energy storage system contributes to maintain the delivered power to the load constant, as long as the wind power is sufficient [28], [29]. To control the speed of the flywheel energy storage system, it is mandatory to find a reference speed which ensures that the system transfers the required energy by the load at any time.

This is seasonal thermal energy storage. Also, can be referred to as interseasonal thermal energy storage. This type of energy storage stores heat or cold over a long period. When this stores the energy, we can use it when we ...
