Interpreting the Chart. 12.6V to 12.8V: If your battery is showing 12.6V or higher, it is fully charged and in excellent health.; 12.0V to 12.4V: This indicates a partially discharged battery, but still capable of functioning well for lighter tasks.; Below 11.8V: At this level, the battery is discharged and needs to be recharged as soon as possible to avoid damage.

Voltage: Ensure the battery's voltage is compatible with your device's voltage requirements. For a 6s battery, the nominal voltage is 22.2V, and the fully charged voltage is 25.2V.

While voltage is important, other factors such as capacity (measured in amp-hours), battery type (AGM, lithium, gel, etc.), and charge cycles must also be taken into account. A 24V battery system might seem ideal for high-power applications, but if the battery's capacity is too low, it will not deliver the expected performance.
